ABSTRACT

Policies and Programs for Agriculture - Federal

This is one of a series of handbooks compiled by Agriculture Canada to provide policy makers in government, farm organizations and universities with essential information about governmental programs of technical and financial assistance to the farming community.

This handbook, containing information about policies and programs of the federal government, summarizes the purpose of each program, the assistance or service provided, who is eligible to receive it, and the agency responsible for its administration. Other handbooks in the series summarize governmental policies and programs in the Western Provinces, the Atlantic Provinces, Ontario and Quebec.

FOREWORD

This publication is one of a series compiled by Agriculture Canada to make available essential information about federal and provincial government policies and programs affecting agriculture. A closely related series covers the legislation pertinent to agriculture of each province and the federal government.

To enable decision-makers in government departments and agencies, universities and farm organizations to retrieve this information in any desired combination, all provincial and federal programs have been placed on computer by Agriculture Canada. A form for requesting such information is included for your convenience at the end of this publication.

This material was prepared by A.R. (Jerry) Jones of the Economics Branch of Agriculture Canada. It was first published in 1975 in the "Canadex" series. To meet new and increased demands, it has been revised and updated in the present form.

The Economics Branch greatly appreciates the co-operation and assistance given by persons within Agriculture Canada, Industry Trade and Commerce, Manpower and Immigration and several agencies of the government that implement agricultural policies.
